## **DENTRIX CERTIFICATION NOW AVAILABLE IN CENTRAL TEXAS**

### **TEMPLE, TEXAS.**

Does your dentist use the latest practice management software to track patient information? Have you ever had a problem with billing? Do their computers always work? Or, are you a dentist looking for the latest software technology? Patients and Dentists in Central Texas will now benefit from the latest training available on practice management software. McLane Advanced Technologies, LLC (MAT) has recently received the Dentrix Certified Integration Engineer (CIE) Certification. Aaron Johnstone completed the three-day training course on May 24, 2006 in Utah. Aaron has provided Information Technology (IT) services to the dental community for the past three years. This training provided him skills and experience in installing, managing, and troubleshooting DENTRIX software.

Skip Carruth, MAT Vice President for Commercial Services, stated "for nearly seven years we have been supporting the dental community in Central Texas. The Dentrix product has grown to be a clear leader in practice management software for these practices. We have made a significant commitment to the dental practices throughout Central Texas by becoming a Dentrix CIE. Not only can we help our clients install and maintain their computer hardware and networks, we have proven our expertise by becoming the only CIE in Central Texas."

The customers appreciate the additional training as well. "Dentrix is the core of practice management. Having MAT readily available to troubleshoot issues makes receiving the CIE Certification very important to us. As we get closer for the need to upgrade our computer systems, we are even more encouraged MAT has received this certification to make that transition as smooth as possible." - Dr. Kirk Bond, DDS, Cox/Bond Dental Group, Temple, Texas.

Dentrix® products include practice management software for dental offices, imaging software, patient education software, blood pressure monitoring software, computer-based training software, voice recognition software, and other products designed to enhance the dental office experience. Dentrix Dental Systems was the first practice management system for Windows in 1989, and was the first approved software for Windows 98. This extensive experience with the Windows operating system has aided us in our efforts to make sure our software is the most compatible in the industry. Dentrix's early vision of a completely paperless, front deskless office is coupled today with a strong commitment to developing the tools necessary to boost productivity and improve efficiency. As the world's leading practice management software provider, Dentrix is striving to develop products that meet the evolving needs of every dental office. The company has made substantial investments in establishing the finest technical services in the profession, which enables Dentrix to develop the highest quality products possible. Dentrix has also invested heavily in research and development, which, too, helps the company to keep abreast of the industry's technology curve.

McLane Advanced Technologies, LLC currently provides IT services to small, medium, and large businesses throughout Texas including over 20 dental practices in the Central Texas region. There are only three CIE's within 100 miles of Temple, TX.
